## BOOSTER SEATS

### Give Your Little Buckeye a **Boost**

- Children using booster seats are twice as likely to survive in a collision than a child using a seat belt only.
- Booster seats help to position a seat belt properly on a child.
- Keep your little Buckeye in a booster seat until:

They can sit with their back against the vehicle seat

Their knees bend over the edge of the vehicle seat

The lap belt is low, over the top of their thighs

The shoulder belt is between their neck and shoulder

They can sit properly for the entire ride
