## REAR-FACING CAR SEATS

If you could keep me 5 times safer,  
**Would You?**

- Children in rear-facing seats are 5 times safer than those in forward-facing seats.
- Rear-facing seats protect the head, neck, and spine, by cradling your child and absorbing the forces of a collision.
- The harness straps on your child's rear-facing seat should be routed through the slots at or below their shoulders, never above.
- The chest clip should be positioned at armpit level.
- Keep your little Buckeye rear-facing until they reach the height or weight limit for their seat, no matter their age, but especially infants and toddlers under 2 years.
