FORWARD-FACING CAR SEATS

TO TETHER IS BETTER

- Using the tether anchor can reduce forward movement of your child's head by 4 to 6 inches in the event of a collision.
- Always use the tether anchor whether you are installing your child's car seat using the LATCH system or seat belt.
- The harness straps on your child's forward-facing seat should be routed through the slots at or above their shoulders, never below.
- The chest clip should be positioned at armpit level.
- Keep your little Buckeye in a forward-facing seat, with a 5-point harness until they reach the height or weight limit for their seat, no matter their age.
